1. Define Thermodynamics.

Answer:

Thermodynamics is the branch of physics that deals with the study of energy, its transformations, and the relationships between heat, work, and other forms of energy within physical systems.

Analysis:

This definition underscores thermodynamics as an energy-centric discipline. It emphasizes the focus on energy transfer processes, which are fundamental to understanding engines, refrigerators, and natural phenomena.

2. State the First Law of Thermodynamics.

Answer:

The First Law of Thermodynamics states that energy cannot be created or destroyed; it can only be converted from one form to another. Mathematically, $\Delta U = Q - W$, where ΔU is the change in internal energy, Q is heat added to the system, and W is work done by the system.
