## Structuring and Labeling Data

### Variable Naming Conventions

- Use clear, descriptive names.
- Keep names concise but informative.
- Avoid spaces and special characters; use underscores `\_`.

### Variable Labels and Value Labels

Adding labels improves readability:

```
```stata
```

```
label variable age "Age of respondent"
```

```
label define genderlbl 1 "Male" 2 "Female"
```

```
label values gender genderlbl
```

```
```
```

## Data Cleaning and Preparation

### Handling Missing Data

Missing data can bias results if not handled properly.

- Identify missing values:

```
```stata
```

```
misstable summarize
```

```
```
```

- Replace missing with specific values:

```
```stata
```

```
replace variable = 0 if missing(variable)
```

```
```
```

- Drop missing observations:

```

```
```stata
```

```
assert gender == 1 | gender == 2
```

```
```
```

- Correct errors manually or through code.

## Recoding Variables

Transform categories or create new variables:

```
```stata

generate age_group = .

replace age_group = 1 if age
replace age_group = 2 if age > 30 & age
replace age_group = 3 if age > 50

label define agegrp 1 "Young" 2 "Middle-aged" 3 "Older"

```

```
```
```

Always verify consistency in variable names and formats before appending.

## Automating Data Management with Do-Files

Create do-files?scripts that automate your workflow:

- Record all steps for reproducibility.
- Use comments (``comment``) for clarity.
- Incorporate error handling and checks.

Example snippet:

```
```stata
```

```
Import data
```

```
import excel using "data.xlsx", firstrow clear
```

```
Clean missing values
```

```
misstable summarize
```

```
drop if missing(variable)
```

```
```stata  
  
preserve  
  
do some operations  
  
restore  
  
```
```

- Use ``compress`` to reduce dataset size:

```
```stata  
  
compress
```

Working with Panel Data

- Declare panel structure:

```
```stata
```

```
xtset id year
```

\*\*\*

- Manage panel-specific operations, such as lagging variables:

```
```stata
```

```
xtlag variable, lags(1)
```
